You will make a post it note application.

The requirements:
1 Window will be used to generate the notes
-It will need a text box to provide a title for new post it
-It will need a text box to provide the note for the new post it
--Before a note can be "saved"/displayed it must go through a spell checker that you create. If any words are mispelled it will turn red and display a message of what word is not spelled correctly. It should also be able to accept numbers.
-It will need a button to "save" the note

X Windows will display each note and provide a close button
-Each window will have a title
-Each window will have the message
-Each will have a random color background set(at least 5 different colors)

Testing:
Run your code
Note 1(no error):
    Title - Test
    Note - Hello this is a test
Note 2(error bad spelling):
    Title - Fail
    Note - Thiis wiil not work
Note 3(no error with numbers):
    Title - Pass
    Note - I need 1000 dollars for my new computer

Note:

Everything must be submitted as a **single** .txt file not a .py file for this project.
This can be written very simply or complex to get the same results.
You should use classes/lists/functions where needed.
Clean code is happy code
